

# People's Energy Tech Test

Thank you for taking the time to do our full-stack tech test.

This round of the interview process comprises the following steps:

1. Execution of this technical test
2. Tech discussion about the test and technology in general

You will be assessed on the following:

- Technology knowhow
- Coding standards

## Tasks

1. Create a NodeJs backend endpoint that returns the following information about the Celestial Bodies of our Solar System:
  - Object name
  - Object picture
  - Object Age
  - Object Solar mass
2. Create a simple ReactJs application that:
  - Calls the endpoint you created in tasks 1
  - Displays that information on the screen

## Deliverables

1. NodeJs and ReactJS as the tech stack
2. Typescript is preferred but not essential
3. Feel free to use as many frameworks/libraries as you wish to deliver the project (including create-react-app)
4. Clear documentation on how to run your solution
5. Demonstrate solid understanding of GIT as source control

Please try to spend no more than 5 hours.

When you are done, share the github / bitbucket url with your interviewer.

If you have any questions, please feel free to reach out to us.

Good luck!
